\* and \*\*

\* [redacted] Comment. The report confirms traffic previously reported. The volume of supply traffic is considered normal and corresponds with that in other railroad districts in January 1952. The additional shipments in December 1951 come up to 41 carloads. In the present report, [redacted] is still mentioned in Dresden as belonging to a large fuel distribution point. According to more recent reports, this agency was dissolved in late February 1952, and its function and [redacted] taken over by the agency in Strassgraeber-Bernsdorf. It is, therefore, believed probable, that the fuel distribution point in Dresden was transferred to Strassgraeber-Bernsdorf. In the Dresden Regional Railroad District, 1,395 cars were assembled for loading in January 1952 as compared with 1,704 cars in December 1951. This equals an average number of 45 cars per day. The decrease in the number of cars to be assembled is plausible in view of the fact that traffic usually decreases in January.
